Carbon nanotube (CNT) gas sensors for emissions from ...

Fri, 14 Sep 2018 14:19:00 GMT Electronic properties of carbon nanotubes can be understood from the band structure of graphene .The dispersion relation for graphene (as shown in Fig. 1(a)) represents the bonding (π) and anti-bonding (π^) orbitals degenerated at K-points (Fermi points) in the Brillouin zone.At K-points, valence and conduction bands are connected with each other due to which band gap in graphene is zero at ...*

Thorium - Wikipedia

Sat, 15 Sep 2018 13:50:00 GMT Thorium is a weakly radioactive metallic chemical element with symbol Th and atomic number 90. Thorium is silvery and tarnishes black when it is exposed to air, forming thorium dioxide; it is moderately hard, malleable, and has a high melting point.Thorium is an electropositive actinide whose chemistry is dominated by the +4 oxidation state; it is quite reactive and can ignite in air when ...
